One of the limiting factors in industry take-up of agent-technology, however, is the lack of adequate software engineering support. The Agent-Oriented Software Engineering Workshop, AOSE, focuses on the synergies and cross fertilization between software engineering and agent research.

dblp: Agent-Oriented Software Engineering

(April 2009) Agent-Oriented Software Engineering (AOSE) is a new software engineering paradigm that arose to apply best practice in the development of complex Multi-Agent Systems (MAS) by focusing on the use of agents, and organizations (communities) of agents as the main abstractions.

Agent-oriented software engineering | The Knowledge ...

What is Agent-Oriented Software Engineering (AOSE) 1. AOSE is the study of the construction of intelligent systems by the use of the agent paradigm, that is, using agent-oriented notions, in any high-level, programming language. In a strict sense: the study of the implementation of agent systems by means of agent-oriented programming languages.

agent-oriented software engineering methodologies proposed in recent years. These methodologies are developed and specially tailored to the characteristics of agents. The roles of these methodologies are to provide methods, models, techniques, and tools so that the development of agent-based systems can be carried out in a formal and systematic way.

Evaluating and Comparing Agent-Oriented Software ...

Agent Oriented Software Engineering Agents and multi-agent systems are currently one of the most interesting research fields in the computer science community. But is this enough to make agent oriented software engineering (AOSE) a new software paradigm?

International Journal of Agent-Oriented Software Engineering

Agent Oriented Software Engineering. This project is concerned with developing suitable methodologies, including the concepts, notation, processes, and supporting tools to design, implement, debug test and maintain multi-agent systems. Intelligent Agent systems are often more complex than the more traditional approaches like Object-Oriented as they are built to operate proactively in highly dynamic environments.

A survey of Agent-Oriented Software Engineering

Our goal in this paper is to introduce and motivate a
methodology, called Tropos,¹ for building agent oriented
software systems. Tropos is based on two key ideas. First, the
notion of agent and all related mentalistic notions (for instance
goals and plans) are used in all phases of software development,
from early analysis down to the actual implementation. Second,
Tropos covers also the very ...

The agent community to date has done a poor job of convincing business and mainstream software engineers of the value of Multi-Agent Systems (MAS) and agent-oriented software engineering. This is largely our fault. We have tried to offer a completely ...
