The OFFSET function is one of the built-in functions in Microsoft Excel. Its purpose is to return a range that is a specified number of rows and columns from a reference cell or range. The range that the OFFSET function returns can be a single cell or a range of multiple adjacent cells.

## **How to use the OFFSET function in Excel + practical examples**

The OFFSET () function returns a cell (or range of cells) that is a specified number of rows and/or columns from the reference cell. For specific descriptions of each component, please see the Help file in Excel. If either the 'rows', 'columns', 'height' or 'width' components are left blank, Excel will assume its value to be zero.
